

Answers to Chapter 15 Study Questions

- $$\text{mass percent} = \frac{\text{mass } KMnO_4}{\text{mass solution}} \times 100\%;$$

$$\text{mass } KMnO_4 = 1.00 \text{ mole} = 158 \text{ g}; \quad \text{mass solution} = 158 \text{ g } KMnO_4 + 158 \text{ g } H_2O = 316 \text{ g}$$

$$\text{mass percent} = \frac{158 \text{ g } KMnO_4}{316 \text{ g solution}} = 50.0 \%$$
- $$335 \text{ g solution} \times \frac{22.0 \text{ g } KMnO_4}{100 \text{ g solution}} \times \frac{1 \text{ mol } KMnO_4}{158 \text{ g } KMnO_4} = 0.466 \text{ moles}$$
- $$275 \text{ mL solution} \times \frac{0.500 \text{ mol } NaCl}{1000 \text{ mL solution}} = 0.138 \text{ moles}$$
- $$250 \text{ mL solution} \times \frac{2.00 \text{ mol } NaCl}{1000 \text{ mL solution}} \times \frac{58.5 \text{ g } NaCl}{1 \text{ mol } NaCl} = 29.2 \text{ g}$$
- $$V_1 \times M_1 = V_2 \times M_2; \quad V_1 \times 2.00 \text{ M} = 125 \text{ mL} \times 0.350 \text{ M}$$

$$V_1 = 125 \text{ mL} \times 0.350 \text{ M} / 2.00 \text{ M} = 21.9 \text{ mL}$$
- $$\text{molarity} = \frac{\text{moles solute}}{L \text{ solution}}; \quad \frac{90.0 \text{ g glucose}}{200 \text{ mL solution}} \times \frac{1000 \text{ mL}}{1 \text{ liter}} \times \frac{1 \text{ mol glucose}}{180 \text{ g glucose}} = 2.50 \text{ M}$$
- $$\frac{24.0 \text{ g sucrose}}{100 \text{ g solution}} \times \frac{1 \text{ mol sucrose}}{342 \text{ g sucrose}} \times \frac{1.10 \text{ g solution}}{1 \text{ cm}^3 \text{ solution}} \times \frac{1000 \text{ cm}^3 \text{ solution}}{1 \text{ L solution}} = 0.772 \text{ M}$$
- a) $CaCl_2(aq) + 2 AgNO_3(aq) \rightarrow 2 AgCl(s) + Ca(NO_3)_2(aq)$

b) $1.72 \text{ g } AgCl \times \frac{1 \text{ mol } AgCl}{143.3 \text{ g } AgCl} \times \frac{1 \text{ mol } CaCl_2}{2 \text{ mol } AgCl} \times \frac{1000 \text{ mL solution}}{0.250 \text{ mol } CaCl_2} = 24.0 \text{ mL}$
- $$V_A \times M_A = V_B \times M_B; \quad V_B \times 0.400 \text{ M} = 16.0 \text{ mL} \times 0.120 \text{ M}$$

$$V_B = 16.0 \text{ mL} \times 0.120 \text{ M} / 0.400 \text{ M} = 4.80 \text{ mL}$$
- Colligative properties: vapor pressure, boiling point, freezing point.
 Not colligative properties: color, electrical conductivity, density
- Highest boiling point = greatest number of solute particles.
 c) 1.0 M $Ca(NO_3)_2$ > d) 1.0 M $MgSO_4$ > b) 1.0 M glucose ($C_6H_{12}O_6$) > a) pure water
 3 mol particles/mol 2 mol particles/mol 1 mol particles/mol
- a) $\Delta T_f = 1.86 \text{ }^\circ\text{C} \times \text{moles solute particles/kg water}$

$$\Delta T_f = 1.86 \text{ }^\circ\text{C} \times \frac{0.11 \text{ moles}}{0.055 \text{ kg } H_2O} = 3.72 \text{ }^\circ\text{C}; \quad T_f = 0 - \Delta T_f = 0 - 3.72 \text{ }^\circ\text{C} = -3.72 \text{ }^\circ\text{C}$$

b) $\Delta T_f = 1.86 \text{ }^\circ\text{C} \times \text{moles solute particles/kg water}$

$$\text{moles} = \frac{\Delta T_f}{1.86} \times \text{kg } H_2O = \frac{2.79^\circ\text{C}}{1.86} \times 0.200 = 0.300 \text{ moles}$$

c) $\Delta T_f = 1.86 \text{ }^\circ\text{C} \times \text{moles solute particles/kg water}$

$$\text{moles particles} = 27.8 \text{ g } CaCl_2 \times \frac{1 \text{ mol } CaCl_2}{111 \text{ g } CaCl_2} \times \frac{3 \text{ mol ions}}{1 \text{ mol } CaCl_2} = 0.751 \text{ mol particles}$$

$$\Delta T_f = 1.86 \text{ }^\circ\text{C} \times \frac{0.751 \text{ mol particles}}{0.250 \text{ kg } H_2O} = 5.59^\circ\text{C}; \quad T_f = -5.59^\circ\text{C}$$

($CaCl_2$ is an electrolyte and it is important to remember that there are 3 moles of ions per mole of $CaCl_2$. The freezing point is three times lower than it would be for a nonelectrolyte.)
