

## Chapter 13 Study Questions

### **Mass percent**

1. What is the mass percentage of  $\text{KMnO}_4$  in a solution containing 1.00 mole of  $\text{KMnO}_4$  and 158 g of water?
2. How many moles of  $\text{KMnO}_4$  are needed to prepare 335 g of a 22.0% solution?

### **Molarity**

3. How many moles of  $\text{NaCl}$  are in 275 mL of 0.500 M  $\text{NaCl}$ ?
4. What mass of  $\text{NaCl}$  is needed to prepare 250. mL of a 2.00 M  $\text{NaCl}$  solution?
5. What volume of a 2.00 M  $\text{NaCl}$  solution is needed to make 125 mL of a 0.350 M  $\text{NaCl}$  solution?
6. What is the molarity of a solution made by dissolving 90.0 grams of glucose ( $\text{C}_6\text{H}_{12}\text{O}_6$ ; molar mass = 180. g/mole) in enough water to yield 200. mL of solution?
7. What mass of potassium chloride is needed to prepare 150. mL of a 0.300 M potassium chloride solution?
8. When 1.00 mol of potassium nitrate is mixed with 100. g of water at  $40^\circ\text{C}$ , 63 g potassium nitrate dissolves.
  - a) Is the solution saturated, unsaturated or supersaturated?
  - b) Calculate the mass percent of potassium nitrate in this solution.
9. What is the molarity of an  $\text{HCl}$  solution if 25.0 mL of a 6.00 M  $\text{HCl}$  solution are diluted to 1.50 liters?
10. How many grams of sodium hydroxide are in 250. g of a 20.0% solution?

## Summary of Chapter 13: Solutions

Definition of solutions

Like dissolves like (polarity)

Solubility

Electrolytes, nonelectrolytes

Strong and weak electrolytes

Unsaturated, saturated and supersaturated solutions

Mass percent

Molarity (M)

Dilution

## Answers to Chapter 13 Study Questions

- $$\text{mass percent} = \frac{\text{mass } KMnO_4}{\text{mass solution}} \times 100\%;$$

$$\text{mass } KMnO_4 = 1.00 \text{ mole} = 158 \text{ g}; \text{ mass solution} = 158 \text{ g } KMnO_4 + 158 \text{ g } H_2O = 316 \text{ g}$$

$$\text{mass percent} = \frac{158 \text{ g } KMnO_4}{316 \text{ g solution}} = 50.0 \%$$
- $$335 \text{ g solution} \times \frac{22.0 \text{ g } KMnO_4}{100 \text{ g solution}} \times \frac{1 \text{ mol } KMnO_4}{158 \text{ g } KMnO_4} = 0.466 \text{ moles}$$
- $$275 \text{ mL solution} \times \frac{0.500 \text{ mol } NaCl}{1000 \text{ mL solution}} = 0.138 \text{ moles}$$
- $$250 \text{ mL solution} \times \frac{2.00 \text{ mol } NaCl}{1000 \text{ mL solution}} \times \frac{58.5 \text{ g } NaCl}{1 \text{ mol } NaCl} = 29.2 \text{ g}$$
- $$V_1 \times M_1 = V_2 \times M_2; \quad V_1 \times 2.00 \text{ M} = 125 \text{ mL} \times 0.350 \text{ M}$$

$$V_1 = 125 \text{ mL} \times 0.350 \text{ M} / 2.00 \text{ M} = 21.9 \text{ mL}$$
- $$\text{molarity} = \frac{\text{moles solute}}{\text{L solution}}; \quad \frac{90.0 \text{ g glucose}}{200 \text{ mL solution}} \times \frac{1000 \text{ mL}}{1 \text{ liter}} \times \frac{1 \text{ mol glucose}}{180 \text{ g glucose}} = 2.50 \text{ M}$$
- (Molarity as a conversion factor)
 
$$150 \text{ mL} \times \frac{0.300 \text{ mol } KCl}{1000 \text{ mL}} \times \frac{74.6 \text{ g}}{1 \text{ mol } KCl} = 3.36 \text{ g}$$
- (Solubility; Mass Percent)
  - Saturated. 1 mole  $KNO_3 = 101\text{g}$ ; since  $101 \text{ g} > 63 \text{ g}$ , only 63 g dissolve and the solution is saturated.
  - $$\text{mass percent} = \frac{\text{mass solute}}{\text{mass solution}} \times 100\% = \frac{63 \text{ g } KNO_3}{163 \text{ g solution}} \times 100\% = 39\%$$
- (Molarity; Dilution)  $V_1 \times M_1 = V_2 \times M_2$ ;  $1.50 \text{ L} = 1500 \text{ mL}$ 

$$25.0 \text{ mL} \times 6.00 \text{ M} = 1500 \text{ mL} \times M_2; \quad M_2 = \frac{25.0 \text{ mL} \times 6.00 \text{ M}}{1500 \text{ mL}} = 0.100 \text{ M}$$
- (Mass percent as a conversion factor)
 
$$250. \text{ g solution} \times \frac{20.0 \text{ g } NaOH}{100 \text{ g solution}} = 50.0 \text{ g } NaOH$$
